

Local Agentic Workflows for Clinical and Genomic Data

The Agentic Bio Fellowship · 6–8 weeks, live + labs + recordings · Cohort 1: bioinformatics / computational biology leads · Individual Innovator ₹1,50,000 · Enterprise Team (3–5 seats) ₹5,00,000
Webinar date: *[fill before sending]*

Problem

- Public LLM APIs are incompatible with genomic, VCF, and protocol data under institutional governance.
- Static Nextflow/Snakemake pipelines still need constant human babysitting for format drift, failed EDA, and annotation lookups.
- Sending PHI/omics off-box creates a compliance blocker that stalls “AI adoption” indefinitely.

What the Fellowship deploys (not a lecture)

- Local LLM baseline (Ollama) on team hardware or an air-gapped VM
- Dockerized Python + R/Bioconductor environments
- Nextflow DSL2 as the **execution plane** (agents plan; Nextflow runs)
- Agent loops over files (VCF v4.2 parse / reformat / annotation) with human review gates
- Recordings + GitHub lab repos the team keeps after the cohort

Enterprise track adds a 60-minute architecture review against *our* stack (legacy LIMS, HPC, or AWS Batch).

Hard ROI this fiscal quarter

Replace the placeholders with the buyer’s own cycle times if they shared them on the webinar.

Lever	Mechanism	Conservative claim to validate internally
Pipeline turnaround	Fewer manual VCF/EDA hand-offs	Hours recovered per run × loaded cost of a bioinformatician
Data residency	No clinical/genomic payloads to public model APIs	Avoids a cloud-AI DPIA delay that can stall a quarter
L&D efficiency	One team invoice vs 3–5 individual reimbursements	₹5L team seat vs 5 × ₹1.5L
Reuse	Labs and Docker/Nextflow baselines stay in their Git	Avoids a one-off vendor demo that expires

Risk controls

- Synthetic VCF and public-domain teaching data in labs; production data never leaves their firewall
- Human review gates before any write-back to clinical or production pipelines
- Self-hosted classroom (ClassroomIO) for recordings — not a consumer MOOC

Ask: Approve **Enterprise Team License ₹5,00,000** (preferred) or **Individual Innovator ₹1,50,000**.
